RIVER MILE INDEX

SEVIER LAKE BASIN, UTAH

AND

MINOR BASINS IN WESTERN UTAH

AND

EASTERN NEVADA

June 1974

FOREWORD

This river mile index for the Sevier Lake Basin and minor streams in Western Utah and Eastern Nevada is one of a series of reports to be issued for stream basins in the Pacific Southwest. River mileages were determined from independent measurements made on U. S. Forest Service planimetric maps or U. S. Geological Survey topographic quadrangles.

River mile distances were measured upstream from the mouth to the nearest tenth mile. Tributaries are shown as entering from the right or left from a position facing downstream. Names of streams are underlined; names of towns are in capital letters. Mile 0.0 for streams disappearing into unconsolidated alluvium or diverted by irrigation was located at a latitude and longitude where the channel was well defined.

Streams and points of interest are based on the volume of flow, size of drainage, and degree of development. Care has been taken to make this index as complete and as accurate a possible. Users are invited to inform the Water Management Subcommittee, Pacific Southwest Interagency Committee, of any corrections. This index was prepared by the Intermountain Region, U. S. Forest Service, Ogden, Utah.
